Why Plan for Knowledge Translation?

1) Because it is a requirement for many research funders
2) Because if we don’t plan for it, it won’t happen
3) Because if it doesn’t happen, it will sit on the shelf or in a journal
4) Because we owe it to tax payers to show what we accomplish with public funds
5) Because funders want to demonstrate return on investment – and consequently, so do you and the organization for whom you work
6) Because we need to demonstrate the impact of our research
7) Because we want to advance science and practice

And that means, getting what we know works to improve health and well-being into the hands of people who can apply it.
Key Components of a KT plan

1) What are your KT goals?
2) Who are your target audiences / knowledge users?
3) How will you engage them?
4) When will you engage them?
5) What are your main messages?
6) What KT strategies will you use?
7) How will you implement your strategies?
8) With what impact (evaluation strategy to determine success of KT plan and impact on health)?
9) What resources are required (budget, staffing, etc)
It starts with identifying your **KT Goals**:
What is your purpose in sharing what you learned?

- Generate awareness & interest
- Share knowledge
- Inform future research
- Generate practice change (practitioners) or behavior change (people)
- Generate policy action
- Mobilize public action
- Commercialization or patent
Who is your audience?

Who?
• Who needs to hear your message?

How?
• How well do you know their preferences, needs?

Act?
• How receptive are they to hear your message? How prepared are they to make decisions?

Blocks?
• What are the barriers to action?
Who are your Knowledge Users?

- Consumers
- Health Practitioners
- Managers (hospitals, workplaces)
- Policy makers
- General Public
- Patients
- Media
- Private industry
- Advocacy groups
- Research funders
- Decision makers
- Research scientists
- Other?
Consider:

- How to involve KUs in project development, interpretation, discussion, knowledge translation activities
- What information KUs need, rather than what you think they need
- How to tailor main messages & KT strategies to KU preferences for format, timeliness, functionality
- One-on-one and face-to-face interaction work best as a base from which to add more virtual formats
- Perceived credibility of the messenger is important
How to Engage: formats for communication

Channels of Communication

- Journals
- Newsletters
- F2F
- Television
- Radio
- Newspapers
- Conferences
- Presentations
- Web 2.0
- Networks
For Report Writing - Consider the 1:3:25 Format

<table>
<thead>
<tr>
<th>1 page: Main messages</th>
<th>3 pages: Executive Summary</th>
<th>25 pages: The Report</th>
</tr>
</thead>
<tbody>
<tr>
<td>Main messages in bullet point format</td>
<td>Summary of findings <em>condensed</em> to service the needs of the knowledge user</td>
<td>Try <em>not</em> to revert to academic prose</td>
</tr>
<tr>
<td>Lessons knowledge-users can take away from the research</td>
<td>Include examples that a knowledge user would understand</td>
<td>Maintain focus on your knowledge user audience</td>
</tr>
</tbody>
</table>
| Implications your work has for theirs (the “so what” piece) | Lead with the most interesting aspect of the research, followed by your approach; less on methods and other details (link to additional files if needed) | Consider using headings:  
  - Context,  
  - Implications  
  - Approach  
  - Results  
  - Additional Resources  
  - Further Research  
  - Reference & Bibliography |
| If possible, provide recommendations for practice and/or policy | This section is NOT an academic abstract | |

Source: adapted from Canadian Health Services Research Foundation
When will you engage them?

End of Grant KT: Typical dissemination and communication

Integrated KT: throughout the research process, as you work collaboratively to shape research process. Knowledge users can assist at different time points:

- **Research Initiation**: prioritizing, defining, proposing research ideas and refining questions (that are feasible and practical)
- **Conducting Research**: data collection, analysis, interpretation
- **Communication and Knowledge Translation**: message development, connecting to targeted audiences, assistance with formats (newsletters, web, webinars)
What is a main message?

✓ A clear, concise, audience-focused statement

✓ Not simply data or findings but rather:
  • what the research results mean,
  • why they are important,
  • what action should be taken as a result (if any)

✓ Tailored to KU needs and preferences

Note: results of a single study can differ from the body of research and have different implications for different settings, so it is helpful to include the context as part of the message.
“In layman’s terms? I’m afraid I don’t know any layman’s terms.”

By Nick Downes. Used by kind permission of The Spectator, 28 APRIL 1990, 50.
Clear communication

Why are you communicating?
To report
To ask
To inform
To influence
To explain

What do you want to say?

How do you intend for the reader to use this information?

Focus on the needs of the knowledge user
Effective if reader can understand the message;
Efficient if reader understands it the FIRST time
Address their needs and questions
Include only essential information (link to other)

Plain language writing:
Don’t overload sentences
Use active voice
Keep sentences short
Keep sentences simple
Avoid ambiguity
Emphasise the positive
Avoid double negatives
Learning Checkpoint

Which elements are universal components of KT?

- Goals
- Audience
- Engagement
- Main message
- Strategy
- Implementation
- Impact evaluation
- Resources
- All of the above
Consider the Evidence for KT Strategies

Adapted from Grol R & Grimshaw J 2003

Knowledge Translation Planning Template

Knowledge Translation Planning Template©

INSTRUCTIONS: This template was designed to assist with the development of Knowledge Translation (KT) plans for research but can be used to plan for non-research projects. The Knowledge Translation Planning Template is universally applicable to areas beyond health. Begin with box #1 and work through to box #13 to address the essential components of the KT planning process.

(1) Project Partners
- researchers
- consumers - patients/families
- the public
- decision makers
- private sector/industry
- research funding body
- volunteer health sector/NGO
- practitioners
- other

(2) Degree of Partner Engagement
- from idea formulation straight through
- after idea formulation & straight through
- at point of dissemination & project end
- beyond the project

Consider: Not all partners will be engaged at the same point in time. Some will be collaborators, end users or audiences, or people hired to do specific activities.

(1) What do the partner(s) bring to the project?

(2) How will partner(s) assist with developing, implementing or evaluating the KT plan?

Action: Capture their specific roles in letters of support to funders, if requested.

(3) Partner(s) Roles

(4) KT Expertise on Team
- scientist(s) with KT expertise
- consultant with KT expertise
- knowledge broker/specialist
- KT supports within the organization(s)
- KT supports within partner organization(s)
- KT supports hired for specific task(s)

Assistance in formulating a KT Plan.

Ontario: The Hospital for Sick Children
© 2008, 2013 The Hospital for Sick Children
Purpose

The *Knowledge Translation Planning Template* © was designed to guide researchers, clinical educators, and KT practitioners through the KT planning process in a stepwise manner such that the core elements of KT planning are considered (Ross, Goering, Jacobson & Butterill, 2006). It was developed in response to funders’ requirements for KT Plans alongside research proposals (e.g., Tetroe et al., 2008), in particular the focus on KT from a range of Canadian funders (CIHR, SSHRC, MSFHR, AIHS, NSHRF).
Applicability

The *Knowledge Translation Planning Template* © is applicable across all health pillars (basic, clinical, health services, population health) and across many sectors (health, mental health, education, social sciences, environmental sciences).

The KT strategies refer to the current state of the evidence base for knowledge translation strategies (Grol & Grimshaw, 2003; Boaz, Baeza, & Fraser, 2011).

The *Knowledge Translation Planning Template* © supports effective and evidence-based knowledge translation of research to practice by individual scientists, research teams, and/or KT practitioners.
## Educational Objectives

<table>
<thead>
<tr>
<th>Category</th>
<th>Objectives for The KT Planning Template user:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Remembering: Recall previous learned information.</td>
<td>Knows the core components of KT planning (i.e., partners, engagement, roles, expertise, knowledge users, KT goals, main messages, KT strategies, KT process, KT impact and evaluation, budget and resources, implementation)</td>
</tr>
<tr>
<td>Understanding: Comprehending the meaning, translation, interpolation, and interpretation of instructions and problems. State a problem in one's own words.</td>
<td>Explains the steps one will follow, and the rationale, for the implementing the KT plan pertaining to the specific project or research endeavour</td>
</tr>
<tr>
<td>Applying: Use a concept in a new situation or unprompted use of an abstraction. Applies what was learned in the classroom into novel situations in the work place.</td>
<td>Produces a KT plan for a specific project or research endeavour</td>
</tr>
<tr>
<td>Analyzing: Separates material or concepts into component parts so that its organizational structure may be understood. Distinguishes between facts and inferences.</td>
<td>Outlines in step fashion the core elements of the KT plans as it pertains to the project or research endeavour</td>
</tr>
<tr>
<td>Evaluating: Make judgments about the value of ideas or materials.</td>
<td>In selecting KT strategies and KT approach (integrated or end of grant KT), describes and justifies the processes involved for their use</td>
</tr>
<tr>
<td>Creating: Builds a structure or pattern from diverse elements. Put parts together to form a whole, with emphasis on creating a new meaning or structure.</td>
<td>Creates a KT plan that will guide the KT activities for a project or research endeavor</td>
</tr>
</tbody>
</table>
Conceptual Background

In Canada, as elsewhere worldwide (Tetroe et al., 2008), planning for integrated (iKT) and end-of-grant knowledge translation is highly encouraged by institutions and research funding bodies in an effort to bridge the research to practice gap (National Research Council, 2001). Approximately two-thirds of funders reviewed by Tetroe et al., (2008) request a KT plan as part of a submission for research funding, and many promote the active participation of knowledge users in core research activities (iKT).

The Knowledge Translation Planning Template © was developed to guide the user in the development of a KT plan for a specific research project or endeavor.

The tool is a universally applicable to health, mental health, allied health, education, and social sciences.
Deployment

The *Knowledge Translation Planning Template* © is an educational component of the Scientist Knowledge Translation Training Program™ (SKTT; Barwick, Butterill, Lockett, Buckley & Goering, 2005) and the Knowledge Translation Professional Certificate™ (KTPC, Barwick, Bovaird, Parker, McMillen & Warmington, 2011), two professional development courses.

It has been taught to over 1,460 SKTT participants since its development in 2008, and to 105 KTPC participants since 2011.

It is available for free as a download on [www.melaniebarwick.com](http://www.melaniebarwick.com).
Adaptations & Spread

The *Knowledge Translation Planning Template* © is widely used, and has informed the work of, and/or been adapted by, several authors/organizations, with permission from the author, including:

- KT planning process on www.MakeResearchMatter.org
- Hospital for Sick Children Foundations’ National Grants Programs www.sickkidsfoundation.com/grants/knowledge.asp
- York University’s Office of Research Services (KMb Unit)
- *EENet*, Ontario’s evidence exchange network for mental health and addictions
- Included in the tool repository for the National Collaborating Centre for Methods and Tools (www.nccmt.ca)
- Community First: Impacts of Community Engagement (CFICE) www.thecommunityfirst.org
- Simcoe Muskoka District Health Unit
- Women and Children's Health Research Institute, Community-University Partnership, Faculty of Extension, University of Alberta
- Addictions Services knowledge brokers in Nova Scotia
- Alberta Addiction & Mental Health Partnership Program www.mentalhealthresearch.ca/KeyInitiatives/ResearchGrants/Seniors_PwD/Pages/KnowledgeExchange.aspx
Adaptations & Spread (cont’d)

- Health Care Programs and Policy Directorate, Health Canada
- Community Health Sciences, Faculty of Medicine, University of Manitoba
- Ontario Heart and Stroke Foundation
- Alliance for Canadian Health Outcomes Research in Diabetes, School of Public Health, University of Alberta
- Occupational Therapy, University of Alberta
- Ontario Agency for Health Protection and Promotion

Use and Adaptation Requests

The *Knowledge Translation Planning Template* © is an open access tool and the author welcomes communications regarding lessons learned, contexts in which it is used, and adaptations.

All adaptations to the tool must cite the original author as per the citation: Barwick, M. (2008, 2013). *Knowledge Translation Planning Template*. Toronto, ON: The Hospital for Sick Children.
Implementation Guidance

• The Knowledge Translation Planning Template © is readily available on the web, at no cost (www.melaniebarwick/training.php).

• In its most recent revision (2013), there is space to include notes on the form. No other materials are required.

• It is recommended that the plan be developed collaboratively by the (research or KT) team.
