

Community Participation Starts at Home

Almost **90% of people with mobility disabilities** live in housing that could be more accessible.

People with disabilities **deserve homes that fit their needs.**

A more usable home makes it easier to get ready to go out, host friends and family, and take part in more community activities.

Change the Inside to Get Outside

Making a home more accessible may be as simple and cheap as adding a small ramp, handrail, or chair.
